☐ Medication list attached

☐ Medical history attached

Referring Doctor:_____ Provider No.: _____

Practice Name: _____

Address: _____

Phone: _____ Fax: _____ HealthLink ID: _____

Please indicate your preference for receiving Reports & Results: ☐ Fax ☐ HealthLink ☐ Other: _____

Signature: _____ Date: _____/ _____/ _____

INFORMATION FOR PATIENTS

Gastroscopy is a procedure to examine the inside of your oesophagus, stomach and duodenum. You will be given an intravenous injection, which will induce a light sleep and then a flexible tube (gastroscope) will be passed through your mouth into the stomach.

Colonoscopy is a procedure to examine the inside of the large bowel. After an intravenous injection to induce light sleep, a flexible tube (colonoscope) will be passed through the back passage along the large bowel. Through this tube, the lining of the bowel can be examined and polyps removed. The bowel must be empty for this examination – a bowel preparation is therefore required for colonoscopy.

Both gastroscopy and colonoscopy are not painful and you will not feel or remember these procedures.
